Skills

- JavaScript | Node.js | TypeScript | MySQL | React | Next.js | NestJS | Git | GitHub | RESTful APIs | Postman | Unit Testing | Cypress

Experience

Quality Assurancer **CargaOnline** *On-site* **02/2025- Present**

Currently working as a QA focused on software quality and automated testing. I am responsible for validating new features, executing regression tests, and identifying bugs before production releases.
I work with test automation using Cypress, creating end-to-end scenarios to ensure stability across the system's main user journeys. I also maintain and improve the automated test suite, aiming to reduce production issues and increase release reliability.
In addition to automated testing, I perform manual testing, requirements analysis, and define critical test scenarios alongside the development team. I participate in bug validation, integration testing, and deployment monitoring.

Frontend Developer **IPsolution** *Remote* **06/2023 - 12/2024**

Worked as a Frontend Developer, handling maintenance and improvements of the legacy interface, as well as fixing bugs in the new interface.
I was responsible for implementing adjustments and developing new features in the legacy system built with Vue.js. When necessary, I also worked on the backend using NestJS. I was responsible for implementing the new image processing system in the project.

Technical Support **IPsolution** *On-site* **06/2023 - 01/2024**

Worked as Technical Support, responsible for maintaining client servers, working with databases, Docker, PM2, Apache, Asterisk, and Linux.
I performed this role for one year at the same company and was later promoted to Frontend Developer.

Education

Technologist Degree **Unifil** **2022.06**

- Associate Degree in Systems Analysis and Development (CST)
